ASSESSMENT TOOL 1 – ANALYTICAL PROBLEM SOLVING

Course Code:	CSA06	Course Title:	Design and Analysis of Algorithms
CO Assessed:	CO2 – Manipulation (BL1, BL2, BL3)	Assessment:	Assessment Tool 1 – Analytical Problem Solving
Weightage:	40% of CIA	Total Marks:	100
CO2 Statement:	Apply Brute Force technique to solve sorting, searching, Closest-Pair and Convex-Hull problems (BL1, BL2, BL3)		
Student Name:	K.HEMASREE	Reg. No.:	192411156
Section / Batch:	SLOT C	Date:	27/07/26

Instructions to Students

- Answer the following question. Total Marks: 100.
- Analyze each problem carefully before applying the appropriate Brute Force technique.
- Clearly show all intermediate steps, comparisons, iterations, and logical reasoning used in solving the problems.
- Apply suitable algorithms for sorting, searching, Closest-Pair, and Convex-Hull problems wherever required.
- Justify the correctness and efficiency of the proposed solution using appropriate complexity analysis.
- Use diagrams, tables, or stepwise illustrations wherever necessary for better explanation.
- Maintain neat presentation, proper algorithmic notation, and structured analytical reasoning throughout the answers.

Question Type	Focus Area	Questions
Application-Based Questions	Apply Brute Force techniques for sorting, searching, Closest-Pair and Convex-Hull problem analysis	Q1

SECTION A – APPLICATION BASED QUESTIONS

Code of Conduct

I KEERTHIPATI HEMA SREE(192411156)_ (Name / Reg No) certify that this submission is my original work and that I have adhered to the guidelines specified for this assessment. I understand that any violation of academic integrity rules will result in disciplinary action.

RUBRICS FOR CALCULATION

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
----------	-----	---------------------	----------------------	----------------------	---------------------

Understanding of Problem Context	20%	Clearly understands the problem and accurately identifies all requirements	Good understanding with minor gaps	Basic understanding; some requirements unclear	Poor understanding or misinterpretation of the problem
Application of Concepts	30%	Accurately applies appropriate concepts to solve complex problems	Applies relevant concepts correctly with minor errors	Applies basic concepts with limited accuracy	Fails to apply appropriate concepts
Problem-Solving Approach	20%	Logical, well-structured, and efficient approach	Mostly logical approach with minor gaps	Basic approach with some inconsistencies	Illogical or unclear approach
Accuracy of Solution	20%	Completely correct solution with proper justification	Mostly correct with minor errors	Partially correct solution	Incorrect or incomplete solution
Clarity	10%	Clear, well-organized, and properly explained solution	Understandable with minor clarity issues	Limited clarity and explanation	Poorly presented and difficult to understand

Marks Evaluation:

Criteria	Wt.	Level 4 – Exemplary	Level 3 – Proficient	Level 2 – Developing	Level 1 – Beginning
Understanding of Problem Context	20%				
Application of Concepts	30%				
Problem-Solving Approach	20%				
Accuracy of Solution	20%				
Clarity	10%				
Total Marks (100):

Q21. Closest Pair – Negative and Positive Coordinates

Given the set of points $\{(-2,-1), (3,4), (0,0), (5,1), (-1,-2)\}$, apply the Closest Pair Brute Force algorithm. Clearly interpret the problem and justify the chosen method. Compute distances between all possible pairs and present the calculations clearly. Identify the closest pair and count the number of pairwise comparisons. Analyze the time complexity of the brute force approach. Verify the correctness of the result and interpret its relevance in spatial analysis.

21. CLOSEST PAIR :

Given Data :

$$A = (-2, -1)$$

$$B = (3, 4)$$

$$C = (0, 0)$$

$$D = (5, 1)$$

$$E = (-1, -2)$$

Distance formula :

$$d = \sqrt{(x_2 - x_1)^2 + (y_2 - y_1)^2}$$

step ① : Compute All Pairwise Distances

pair 1 : A and B

$$\begin{aligned} d &= \sqrt{(3 - (-2))^2 + (4 - (-1))^2} \\ &= \sqrt{5^2 + 5^2} = \sqrt{25 + 25} = \sqrt{50} = 7.07 \end{aligned}$$

Pair 2 : A and C

$$\begin{aligned} d &= \sqrt{(0 - (-2))^2 + (0 - (-1))^2} \\ &= \sqrt{(2)^2 + (1)^2} = \sqrt{4 + 1} = \sqrt{5} = 2.24 \end{aligned}$$

Pair 3 : A and D

$$d = \sqrt{(5 - (-2))^2 + (1 - (-1))^2} = \sqrt{53} = 7.28$$

Step ③: Tabulate the Results

Comparison	Pair	Distance
1.	A - B	7.07
2.	A - C	2.24
3.	A - D	7.28
4.	A - E	1.41
5.	B - C	5.10
6.	B - D	3.61
7.	B - E	7.21
8.	C - D	5.10
9.	C - E	2.24
10	D - E	6.71

Step ④: closest pair

$(-2, -1)$ and $(-1, -2)$

Minimum distance $\sqrt{2} \approx 1.41$ units

Step ⑤: Time complexity

$$T(n) = \frac{n(n-1)}{2} = \frac{n^2 - n}{2}$$

$T(n) = O(n^2) \rightarrow$ Time complexity.

$O(1) \rightarrow$ space complexity

total comparisons = 10.
